Allowable Subject Matter

Claims 1, 2, 4 and 6-41 are allowed.

The following is an examiner's statement of reasons for allowance: the prior arts (US Pat. No. 6,170,780 and US Pat. No. 875,279) fail to disclose a combination of an under floor cable junction unit installed in a raised-floor system above a base floor, the space between the base floor and the raised floor being arranged as a cooling air supply duct, the junction unit having dimensions enabling the unit to be located between the base and raised floors, the unit having opposite faces on different horizontally spaced members and comprising slide-in data connector units able to be slid from outside into the junction unit at least one of its faces, the slide-in connector units being arranged on at least two levels in the junction unit, one above the other and being spaced vertically from each other to provide passage of cooling air in the duct through the junction unit between the opposite faces (claim 9); the junction unit having a top side, wherein the top side or at least a major part of it is open to enable the passage of cooling air through the top side and thereby form part of the cooling air supply duct while the cable junction unit is installed in the duct (claim 7); the frame comprising portal front parts and sidebars connecting the front parts, such that the portal front parts are opposite each other, the under floor cable junction unit being arranged to be width and height adjustable (claims 20-21); at least one of the faces including rows of data connectors, and at least one horizontal sidebar is arranged at each of the lateral sides, the at least one horizontal sidebar being arranged to enable permanent cables coming from the inner side of said connector rows to pass above and outwardly of the sidebar

downwardly to a base floor and to be fixed to the sidebar (claim 22); sidebars extending between first and second parallel planes in which the first and second members are located and affecting the spacing between the parallel planes, structures mechanically connecting the members and sidebars together so the (a) connecting structures, (b) elongated members and (c) and sidebars form a frame having a substantially open top between the spaced elongated members and sides with openings for enabling cooling air between the base floor and the raised floor to flow from outside the frame and through the top toward a panel in the raised floor with cooling air outlets, the first and second members having faces facing away from an interior portion of the frame, the faces of the first and second members including many data connectors for electromagnetic signals, the many data connectors included on the faces of the first and second members being at many different positions in the elongation direction of the first and second members (claim 36) as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
